The invention relates to a DNA construct (I) a second (F2) expression cassette. F1 of the

comprising a first (F1) and DNA construct, in operable

Claim 8; Page 3; 25pp; English.

Novel DNA construct useful for producing a corn plant that tolerates application of glyphosate herbicide, comprises two transgene expression

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    linkage, has rice actin 1 (RA1) promoter, RA1 intron, chloroplast transit peptide gene (II), glyphosate tolerant 5-enol-pyruvylshikimate-3-phosphate synthase (EPSPS) gene (III), and transcriptional terminator (IV), and F2 has cauliflower mosaic virus 35S promoter, Hsp70 intron, (II), (III) and (IV). Also included are two DNA sequences from corn plant PV-ZMGT32(nk603) of 498 or 1183bp, or primers and probes derived from them (used to detect transgene junction points). The construct is useful for producing a corn plant that tolerates application of glyphosate herbicide by transforming a corn cell with, selecting the corn cell for tolerance to application of glyphosate, and growing the corn cell into a fertile corn plant. The present sequence is a transgene junction probe sequence consisting of corn plastid DNA and vector sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        5-enol-pyruvylshikimate-3-phosphate syni

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     linkage, has rice actin 1 (RAI) promoter, RAI intron, chloroplast transit peptide gene (II), glyphosate tolerant 5-enol-pyruyy.shikkmate-3-phosphate synthase (EPSPS) gene (III), and transcriptional terminator (IV), and r2 has cauliflower mosaic virus 35S promoter, Hsp70 intron, (III) and (IV). Also included are two DNA sequences from corn plant rv-zMcT32(nk603) of 498 or 1183bp, or primers and probes derived from them (used to detect transgene junction points). The construct is useful for producing a corn plant that tolerates application of glyphosate herbicide by transforming a corn cell with, selecting the corn cell into a fertile corn plant. The present sequence is the 1183bp amplicon consisting of the Agrobacteium transcriptional terminator sequence,
WPI;

New recombinant DNA construct comprising a promoter positioned to provide for expression of a polynucleotide encoding a polypeptide from a microbial source, useful for producing plants with improved properties.

Claim 1; SEQ ID NO 33178; 122pp; English.

comprising the recombinant DNA construct and a method of producing a CC transformed plant having an improved property. The plant is a crop plant combinant DNA construct and a method of producing a CC transformed plant having an improved property. The plant is a crop plant combinant DNA construct and growing the transformed plant composition as maize or soybean. The method of producing a transformed plant composition and property comprises transformed plant with the CC improved plant properties and growing the transformed plant with the CC improved plant properties, e.g. improved co.d., heat or drought tolerance, increased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth regulators, increased rate of CC condent, improved yield by modification of carbohydrate, nitrogen or possiblorus use and/or uptake, by modification of photosynthesis or by providing improved plant growth and development under at least one stress condition. This sequence represents a bacterial polymucleotide used in the scope of the invention. Note: The sequence data for this patent did cont form part of the printed specification but was obtained in electronic conformators. The sequence conv/sequence have to severe to conv/sequence to plant growth and contained and the patent did cont form part of the printed specification but was obtained in electronic conformators. promoter functional in a plant cell, where the promoter is positioned provide for expression of a polynucleotide encoding a polypeptide from format from USPTO at segdata.uspto.gov/sequence.html. relates to a recombinant DNA construct comprising n to

Monitoring differential expression of genes in filamentous fungal cells uses fluorescence-labeled nucleic acids isolated from the cells and a substrate of expressed sequence tags.

Claim 86; Page 768; 3161pp; English.

The present invention describes a method for monitoring differential CC expression of genes in a first filamentous fungal (FF) cell relative to cells. The method uses fluorescence-labeled nucleic acids isolated from CC the FF cells and a substrate of expressed sequence tags (EST). The ESTs are used in the methods for monitoring differential expression of genes in a first filamentous fungal (FF) cell relative to expression of genes cells and expression of genes from FF cells allows the production potential cof the microorganisms to be improved. New genes may be discovered, composible functions of unknown open reading frames can be identified and compositions, environmental stress, spore morphogenesis, recombination, cometabolic or catabolic pathway engineering. Using ESTs provides several advantages over genomic or random cDNA clones including elimination of compositions as one spot on an array equals one gene or open reading frame, and organisation of the microarrays based on function of the gene products to facilitate analysis of the results. AAF07478 to AAF11247 compositions appears in an AAF11247 to AAF112537 represents ESTs from Aspergillus oryzae; and AAF14879 to AAF1337 represents ESTs from incomposition and AAF14879 to AAF1337 represents ESTs from composition and AAF14879 to AAF1337 represents ESTs from the present provides and appears in the present expresent and appears in the present expresent expresents expression of the present expresents ESTs from the present expresent expression and appears and AAF14879 to AAF1337 represents ESTs from the present expresent expresent expresent expresents expresent expresents e

                                                                                                               CC AAF71360 to AAF71750 encode the Corynebacterium glutamicum sugar CC metabolism and oxidative phosphorylation (SMP) proteins given in AAB79243 CC to AAB 79633 which are involved in carbon metabolism and energy production. The C. glutamicum SMP gene can be used in vectors (II) for CC expression in host cells and production or modulation of production of CC fine chemicals, such as, an organic caid, a proteinogenic or conproteinogenic amino acid (preferred), a purine or pyrimidine base, a nucleoside, a nucleotide, a lipid, a saturated or unsaturated fatty acid, a carbohydrate, an aromatic compound, a vitamin, a cofactor, a CC polyketide, or an enzyme. The presence of (I) or SMP proteins (III) CC encoded by them are used for diagnosing the presence or activity of CC corynebacterium diphtheriae in a subject. (I), (III) or host cells CC containing them are used to map genomes of organisms related to C. CC containing them are used to map genomes of organisms related to C. CC containing them are used to map genomes of organisms related for containing them are used to map genomes of organisms related for containing them are used to map genomes of organisms related for containing them are used to map genomes of organisms related for containing in modulating SMP protein regions required for metabolism of sugars, and in modulating high-energy molecule production in acil (i.a. hrm. Nanen)

                                                                                                                                                                                                                                                                                       The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a nucleic acid described in the exemplification of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the European Patent Office
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Nakagawa S,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a nucleic acid described in the exemplification of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the European Patent Office
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   organic acid synthesis; ds

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           EP1108790-A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Corynebacterium glutamicum.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing

This invention is related to a novel isolated canine nucleic acid sequences and the construction of canine microarrays containing a CC significant portion of the canine genome. The isolated canine nucleic acid acid sequences of the invention may be useful for drug screening and toxicity assays. The invention is therefore useful for assessing the CC impact, including toxicity, of a compound, pharmaceutical agent or CC environmental pollutant on a cell or living organism. The methods are useful for detectal cellular response in a sample individually or as part of a CC gene expression profile. It is also useful as diagnostic agents or markers CC detect a cellular response in a sample individually or as part of a CC producing electronic Northerns that allow the user to determine the cell type or tissue in which a given gene is expressed and to allow the particular tissue or cell. The methods are useful for determination of the abundance or expression level of a given gene in a CC particular tissue or cell. The methods are useful for determining the CC pathologies such as those of the liver (liver necrosis, fatty liver clikelihood that a compound or test agent will induce various specific pathologies such as those of the liver (liver necrosis, fatty liver clikelihood that a methods are also useful for predicting or elucidating the toxins. The methods are also useful for predicting or elucidating the toxins. The methods are also useful for predicting or elucidating the toxins. The methods are also useful for predicting or elucidating the toxins. The methods are also useful for predicting or elucidating the toxins. The sequence which was claimed for use during the compound or test agent due to the similarity of the expression profile compound or test agent due to the similarity of the expression profile construction of a canine microarray of the invention.
New isolated nucleic acid molecule, useful for drug screening and toxicity assays or for assessing the impact, including toxicity, of compound, pharmaceutical agent or environmental pollutant on a cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim 1; SEQ ID NO 6234; 41pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (1) is useful for: (a) assessing whether a patient is affilicted with prostate cancer; (b) monitoring the progression of prostate cancer in a patient; (c) assessing the efficacy of a test compound to inhibit prostate cancer in a patient; (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate cell carcinogenic potential of a compound; (g) determining whether prostate cancer has metastaized in a patient; (l) is also useful as a pharmacodyanamic or pharmacogenomic marker
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel isolated nucleic acid molecule associated with cancerous state prostate cells and correlating with presence of prostate cancer, use for detecting presence of prostate cancer, stage of prostate cancer.
                                                                                                                                                                                                                                                                                                                                        Human; prostate pharmacogenomic

(I) is useful for: (a) assessing whether a patient is afflicted with prostate cancer; (b) monitoring the progression of prostate cancer in a patient; (c) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate cancer has metastazized in a patient; (f) assessing the aggressiveness or indolence of prostate cancer in a patient; (i) is also useful as a pharmacodyanamic or pharmacogenomic marker

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       polypeptides, methods of screening for modulators of ORFX expression or activity, and methods of screening individuals for a predisposition to an ORFX-associated disorder. The ORFX proteins of the invention have a wide range of biological activities, such as cytokine, cell proliferation, cell differentiation, immune modulation, haematopoiesis regulation, tissue growth, anglogenesis, activin or inhibin activity, chemotactic/ chemokinetic activity, haemostattic activity, thrombolytic activity, receptor/ligand, antiinflammatory activity, tumour inhibition activity, receptor/ligand, antiinflammatory activity, tumour inhibition activity, and may also be involved in the determination of bodily characteristics, fertility and behaviour. ORFX proteins, nucleic acids and antibodies may be used in the treatment of cancers, other proliferative disorders such as psortlass and benign tumours,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ABN75587 represent cDNAs encoding them. The invention also encompasses polypeptides at least 80% identical to the ORF1-ORF4534 (collectively referred to as ORFX) proteins, polymucleotides at least 85% identical to the ORFX nucleic acid sequences, vectors and host cells comprising ORFX polymucleotides, the recombinant production of ORFX proteins, antibodies specific for ORFX proteins, methods of detecting ORFX polymucleotides and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel human polypeptides and polynucleotides useful for diagnosing, preventing and treating cardiovascular disease, neurodegenerative, hyperproliferative disorders and disorders related to organ

(I) is useful for: (a) assessing whether a patient is afflicted with prostate cancer; (b) monitoring the progression of prostate cancer in a patient; (c) assessing the efficacy of a test compound to inhibit prostate cancer in a patient; (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate cell carcinogenic potential of a compound; (g)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel isolated nucleic acid molecule associated with cancerous state of prostate cells and correlating with presence of prostate cancer, useful for detecting presence of prostate cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        09-JUN-2000;

methylation of a particular cytosine in a motif 5'-CpG-3', present in a cytosine (C) but not methylated C, to uracil, then part of the genomic Sytosine (C) but not methylated C, to uracil, then part of the genomic CC DNA that contains the target C is amplified to form a labeled amplicon. CC The amplicon is hybridised to two classes, each with at least one member, CC of oligonuclectides and/or peptide-nucleic acid (PNA) oligomers and the CC degree of hybridisation to both classes is determined from the label on the amplicon. From the ratio of labels hybridised to the two classes of coligomers, the degree of methylation is calculated. The method is used: CC (i) for diagnosis and/or prognosis of side effects of therapeutic drugs CC and of a wide range of diseases, e.g. cancer, disorders of the central CC nervous, cardiovascular, gastrointestinal and respiratory systems etc., C particularly by detecting mutations or single nucleotide polymorphisms CC (SNP's); and (ii) for differentiation of cell or tissue types and for ciatus of many C residues to be determined simultaneously. AB013410-CC AB054121 represent genomic DNA sequences used to illustrate the method CC disclosure of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Determining the degree of cytosine diagnosis and prognosis, comprises from chemically treated DNA.

XX

This invention describes a novel method for determining the degree of comparity of a particular cytosine in a motif 5'-CpG-3', present in a cytosine in a motif 5'-CpG-3', present in a cytosine (C) but not methylated C, to uracil, then part of the genomic cytosine (C) but not methylated C, to uracil, then part of the genomic cytosine (C) but not methylated C, to uracil, then part of the genomic cytosine (C) but not methylated C, to uracil, then part of the genomic cytosine (C) but not methylated C, to uracil, then part of the genomic cytosine (C) but not methylated C, to uracil, then part of the genomic cytosine (C) but not contains the target C is amplified to form a labeled amplicon. Cytosine cytosine cytosine cytosine alactic deplaced to the cytosine member, of oligomers and/or poptide-nucleic acid (PNA) oligomers and the cytosine cytosine cytosine method is used: (1) for diagnosis and/or prognosis of side effects of the two classes of cytosine cytosine cytosine method is used: (2) for diagnosis and/or prognosis of side effects of the central cytosine cytosine used: (3) for diagnosis and/or prognosis of side effects of the central cytosine cytosine methylation cytosine methylation cytosine methylation cytosine methylation cytosine methylation of cell or tissue types and for cytosine cytosine methylation described in the method allows the method allows the method cytosine methylation described in the cytosine cytosine methylation described in the cytosine cytosine methylation cytosine cytosine

TITLE OF INVENTION: Chlamydia pneumoniae genomic sequence and polypeptides, fragmenty of Invention: thereof and uses thereof, in particular for the diagnosis, previous of Invention: and treatment of infection
FILE REFERENCE: 9710-003-999
CURRENT APPLICATION NUMBER: US/10/289,762
CURRENT FILING DATE: 2003-03-27
NUMBER OF SEQ ID NOS: 6849
SEQ ID NO 5457
LENGTH: 20
TYPE: DNA
CRANISM: Chlamydia pneumoniae
US-10-289-762-5457

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     seq length: 0

Direct Submission
Submitted (12-JAN-2002) Human Genome Sequencing Center, Department Submitted (12-JAN-2002) Human Genome Sequencing Center, Openof Molecular and Human Genetics, Baylor College of Medicine, One of Molecular and Human Genetics, USA
and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Bach contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature
                                                                                                                                                                                                                                                                                                                                                                                                                                                  Submitted (13-MAY-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA On May 13, 2003 this sequence version replaced gi:23268058. The sequence in this assembly is a combination of BAC based reads

TITLE

\* NOTE: Estimated insert size may differ from sequence length

(see http://www.hgsc.bcm.tmc.edu/docs/Genbank draft data.)

\* NOTE: This is a 'working draft' sequence. It currently

\* consists of 3 contigs. The true order of the pieces

\* is not known and their order in this sequence record is

\* arbitrary. Gaps between the contigs are represented as

\* runs of N, but the exact sizes of the gaps are unknown.

\* This record will be updated with the finished sequence Center project name: GLUL Center clone name: CH220-107N12 Center clone name: CH220-107N12 Center Summary Statistics Assembly program: Atlas 3.0; Consensus quality: 201968 bases at least Q40 Consensus quality: 205320 bases at least Q30 Consensus quality: 207760 bases at least Q20 Estimated insert size: 213439; sum-of-contigs estimation Web site: http://www.hgsc.bcm.tmc.edu/Contact: hgsc-help@bcm.tmc.edu ------ Genome Center

                                             Submitted (19-SEP-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
On Sep 19, 2002 this sequence version replaced gi:21741421.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequening reads assembled using Atlas (http://www.hgsc.bom.tmc.edu/projects/rat/). As a result, the sequence may extend beyond the ends of the clone and there may be contigs that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Submitted (13-FEB-2002) Human Genome Sequencing Center, Depart of Molecular and Human Genetics, Baylor College of Medicine, Baylor Plaza, Houston, TX 77030, USA

Consensus quality: 220444 bases at least Q20
Consensus quality: 221030 bases at least Q20
Estimated insert size: 235091; sum-of-contigs estimation quality coverage: 4x in Q20 bases; sum-of-contigs estimation

\* NOTE: Estimated insert size may differ from sequence length

(see http://www.hgsc.bcm.tmc.edu/docs/Genbank\_draft\_data.html).

NOTE: This is a 'working draft' sequence. It currently

consists of 7 contigs. The true order of the pieces

is not known and their order in this sequence record is

arbitrary. Gaps between the contigs are represented as

runs of N, but the exact sizes of the gaps are unknown.

This record will be updated with the finished sequence

as soon as it is available and the accession number will

be preserved.

152447 152547 152446: contig of 152446 bp in length 152546: gap of unknown length 214193: contig of 61647 bp in length

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           requests: clonerequest@sanger.ac.uk
On Jul 23, 2000 this sequence version replaced gi:9367364.
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission
corresponding to the overlapping clone, as we submit sequences with
only a small overlap as described above.
This sequence has been finished according to sequence map criteria
as follows. An attempt is made to resolve all sequencing problems,
such as compressions and repeats, but not necessarily within known
such as has the property of the companies of the compan
                                                                                                                                                                                                                                                                                                                                                                                                                          The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:
Em: EMBL; Sw: SWISSPROT; TT:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 10, constructed by the Sanger Centre Chromosome 10 Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/Chr10
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AL133551

175940 bp DNA linear PRI 21-AUG-Human DNA sequence from clone RPI1-57G10 on chromosome 10 Conte a J-domain containing protein (JDP1) isoform B, the SIRT1 gene (Sir2-like proteins (siruitins) type 1), part of a novel gene (Sir2-like proteins) type 1), part of a novel gene similar to KIAA0032, two ribosomal pseudogenes, 2 CpG islands, RSTE cree and GCS.
                                                                                                                                                                                                                                                  Park Cancer Institute by the group of Pieter de Jong. Address for correspondence: kaos@kazusa.or.jp, Address for correspondence: kaos@kazusa.or.jp, Passe see http://www.kazusa.or.jp/kaos@gi-bin/agd_graph.cgi?c=Kl9Ml3 Genes with similarity to proteins in the databases are described in 'product' or 'note' qualifiers. Genes that have no significant protein similarity are described as 'unknown protein'.

The software programs used to predict genes include: Grail (Informatics Group, Oak Ridge National Laboratory, http://compbio.ornl.gov/Grail-1.3/), GENSCAN (Chris Burge, MIT, http://cCR-081.mit.edu/GENSCAN.html), MerGene2 (S.M. Hebsgaard, et al., CBS, Technical University of Denmark, http://www.cbs.dtu.dk/services/NetGene2/) and SplicePredictor (Volker Brendel, Stanford University, http://gremlinl.zool.iastate.edu/ggi-bin/sp.cgi).

Genes encoding tRNAs are predicted by tRNAscan-SE/).

This sequence may not be the entire insert of this clone. It may be shorter because we remove overlaps between neighboring submissions. Incention/Qualifiers
